Patch Subject: MISC

Patch Priority: MANDATORY

See 'New Patch Report' for details.

FROM: NAVARRO, JUAN 28 Jun 04 09:15 86 Lines

SUBJECT: Reply to: New Released Patch AMH*3*2

Files amh_0300.02k and amh_0300.02n were transmitted to Area Computers.

Patch 2 was tested at PIMC, Shingle Springs and Chinle.

Patch 2 makes the following changes:

- Adds a new option under the Manager Utilities to allow backloading of old CDMIS data into the Behavioral Health Module. This option is locked with a key (AMHZ CDMIS BACKLOAD) and should be run at the discretion of the program after they discontinue using CDMIS and all CDMIS users are using the Behavioral Health Module. (AMHCDBL*)
- Added a SECURITY KEY called AMHZ DELETE VISIT. The ability to delete a visit, treatment plan or suicide form is now locked. The supervisors and program managers should be allocated this key. Only those with the key will be able to delete a visit, treatment plan or suicide form. (AMHLETP1,AMHLEP1,AMHLEE)
- Added the capability for a site to have an Interactive PCC link. If the site parameter is set to YES the user will be asked to select a PCC visit if one already exists. This should be used at sites that are checking patients into Mental Health, Social Services or Chemical dependency clinics where the check-in process creates the PCC visit.
- Site parameter file and screens were updated. (AMHPCCL)
- Modified the SEEN report to exclude closed cases (AMHRC1)
- Fixed activity report to correctly tally problems if problem narrative is same or similar (AMHRPTST)
- Modified the ACT report to include AGE, GENDER and Clinic Type as choices (AMHRPTST, AMHRPTI)
- Added FACE SHEET as an option on PDE. (AMHVRL, protocol)
- Added a new report to display time spent in group by patient.(AMHRC3)
- Revised Treatment Plans needing reviewed report to exclude resolved Treatment Plans.
- Modified SAN F/U form to combine items 8 through 11. (AMHLESAN)
- Added a new site parameter to only allow those entered into the site parameter file to see all visits on the day in SDE/RDE. If the user is not entered into the site parameter they will only see the visits they entered or were a provider on. (AMHLEL)

Behavioral Health System (AMH) v3.0
Patch 2 Release Notice
Page 2
